## EDUCATION

Master in de industriële wetenschappen, elektronica-ICT

Katholieke Universiteit Leuven

2018

Campus De Nayer

## MASTER THESIS

Continuous unobtrusive user authentication using gait for wearable devices, utilizing machine learning algorithms

Onespan

2018

Brussel (Strombeek-Bever)

- Researched gait-based authentication method amidst growing interest in non-explicit user input.
- Enhanced an existing barebone implementation featuring an **Android** wearable app for data recording and a **Python** server app for offline processing.
- Integrated human activity and gait recognition systems, employing traditional machine learning models and a novel, fast, and accurate feature extraction technique.
- Resulted in a seamless, continuous gait-based authentication system that enables offline data capture, server-based training, and real-time evaluation on a wearable.

## EXPERIENCE

Junior Software Engineer

Sioux Embedded Systems

November 2018 – February 2019

- Wrote essential tools to facilitate seamless transition for a customer migrating from Perforce Version Control System (VCS) to **Git**.
- Implemented existing and new features using **Python** and GitLab API, ensuring compatibility and addressing in-house developer requirements.
- Set up R&D internal website to provide an overview of projects that updates nightly

## SOFTSKILLS

Learning Potential Team Work Agile Organization  
Flexibility MultiTasking Professionalism Scrum  
Eye for detail Responsibility Work Under Pressure

## PROJECTS

8051 microcontroller floating-point library (Assembly)  
implementation of four operations (+, -, \*, /) for two floating point numbers in Assembly without MUL/DIV

Drawing Cards (JS, React)  
web app hosted on github pages. draw one or multiple cards, shuffle, flip over the deck.

Azerothcore (C++, SQL, Lua)  
open source contributor, submitting pull requests addressing bugs in their core (C++) and database (SQL)

Video compilations (Python, JS, Electron, APIs, SQL)  
Create video compilations of twitch clips and upload to Youtube with ease. compile with cli or gui interface

Vocabulary (Python, Jupyter)  
Easy-to-read and printable vocabulary lists for commonly used English words. The lists cover spelling, meaning, example usage, and lexical spelling

Loot addon (Lua)  
coupled existing loot distribution addons to allow parallel auctioning satisfying in-house demands

## TECHNICAL SKILLS

Python +++ Git +++ Java ++  
VIM ++ Javascript ++ React ++  
CI/CD ++ PL/SQL ++ C/C++ ++  
8051 ASM ++ C# ++ Docker +
